

Solutions barcode-rfid-voice-inventory-mobility

Honeywell

PRODUCTIVITY DRIVEN SOFTWARE AND HARDWARE SOLUTIONS

Improve worker productivity and supply chain accuracy using the latest in barcode, RFID, wireless technology, mobility, and voice-directed technology.

EXPLORE SOLUTIONS >>

FEATURED SOLUTIONS

DeltaOne Software provides inventory, cycle count, receiving, put away, picking & shipping, WIP transactions, and asset tracking solutions customized to match each client's workflow. DeltaOne's software solutions for Windows and Android devices are designed for most mobile computers, vehicle mount computers, tablets, hands-free scanners, RFID scanners, and portals.

DOUBLECHECK LIVE (DCL)

DeltaOne Software's DCL platform can be used for production, manufacturing, inventory, DSD, asset tracking, catch-weight processing, traceability etc., capturing the data needed to improve the bottom-line. DCL is designed to work seamlessly with most ERP and accounting packages—allowing implementation without disrupting existing systems or requiring extensive retraining.

ASSET TRACKING

Manage high-value equipment such as forklifts, pallet jacks, barcode scanners, computers, and tools using Asset Tracking. Inventoried assets are searchable by user, check-in time, and check-out time. Additional features include maintenance contract expiration tracking, reporting, and alerts.

LABELING SOLUTIONS AND LABEL MANAGEMENT

DeltaOne offers comprehensive labeling solutions and label management services. We provide assistance with label media selection for off-the-shelf, custom labels and pre-print labels. Our proactive approach considers challenges with label application, turn times and more. We also provide labeling software and design services.

QUIKWGT

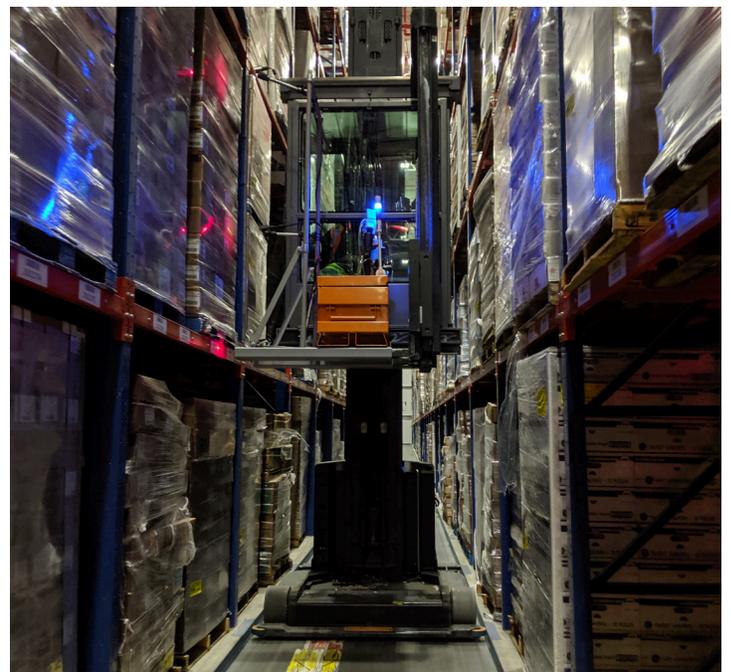

DeltaOne's catch-weight application, QuikWgt, accurately captures variable weights for products such as meat, fish, cheese, etc. It decodes proprietary label formats and allows order picking by weight. Product tracking by date, lot, and serial number enable USDA compliance and meet customs requirements. Integrate QuikWgt into existing ERP systems or utilize it as a standalone application.

AUTOMATED CYCLECOUNT

Run a full physical inventory in nearly half the time using DeltaOne's Automated CycleCount. A single operator sled, which sits on a forklift or turret truck, automatically counts inventory while simultaneously cross-referencing it against anticipated inventory. Corrections to inventory can be executed in real-time or applied later.

Cold Chain Food Labels

Automated CycleCount

FEATURED

PRODUCTS

We understand the challenges distribution centers face and are committed to providing our customers with solutions and products tailored to their needs. Combined with industry-leading Honeywell products, DeltaOne Software's solutions allow for faster, smarter, and more effective work to be done throughout the supply chain—specifically within the distribution center sector.
